

Timber Structures Assessment

EDM International's staff of wood scientists and structural engineers offers a unique combination of expertise in inspection and assessment of wood structures. We specialize in the evaluation of wood products in construction applications and historic structures, and standard and customized testing.

Our consulting services include:

- Field inspection of wood structures
- Strength assessment
- Decay detection and quantification
- Material testing
- Nondestructive evaluation
- Forensic engineering and failure analysis
- Species identification
- Litigation support
