

DISTRIBUTION ENGINEER I/II

Our San Diego office is hiring a Level I/II Distribution Electrical Engineer. The successful candidate will take on an active role working directly with clients/vendors and field personnel revising overhead and underground distribution standards, assessing technical data on new products and working with testing labs and research facilities. If you like challenging assignments, getting involved with research and development for new products, are a self-motivated professional, and want to grow your career, then we are looking for you to join our team!

Responsibilities:

- Update existing and create new construction standards
- Review and recommend changes to Safety standards
- Work with clients in developing scopes of work that accomplish their needs technically and financially
- Electrical technical analysis to support new product selections
- Analyze failed materials and products - root cause, prevention and improvement
- Update clients on progress of technical work and any changes to schedules
- Assist in development of new clients
- Utilize experience and engineering techniques to determine cost alternatives to meet GO95 or NESC requirements
- Meet with clients periodically, traveling to job sites and working directly with field personnel, testing labs and research facilities

Qualifications:

- Bachelor of Science in Engineering (Electrical or Mechanical) from an accredited ABET university/college
- Bachelor of Science in Engineering Technology (Electrical) with relevant experience
- Power engineering discipline is preferred
- Strong organizational and project coordination abilities is required
- Creative problem solving and relationship building skills are required
- Familiarity with electric utility overhead, underground equipment and installation techniques is preferred
- Distribution overhead line design experience is preferred
- Familiarity with overhead distribution line construction is preferred
